EDUCATION

University of Toronto, Scarborough Campus

Sep 2024 - Jun 2028

4th Year Honours BSc Student (14.0/20.0 credits completed)

Co-op Computer Science - Information Systems Specialist Stream

TECHNICAL SKILLS

Languages: Python, JavaScript, Java, SQL, C, TypeScript

Frontend: React, Mantine UI, HTML5/CSS3

Backend: Node.js, FastAPI, Firebase (NoSQL), Supabase, PostgreSQL, SQLite, RESTful APIs (Axios), Gemini API.

AI & Data Analysis: LangChain, LangGraph (Agentic AI), Pandas, NumPy, Scikit-learn, Matplotlib.

Systems & Infrastructure: Unix/Linux, Shell Scripting, Socket Programming (TCP/IP), Epoll, SSH, Git, Docker.

Specialized Tools: Figma (UI/UX), ArcGIS, QGIS, MS Excel/Access.

PROJECTS

Beacon

Hackathon Project - GenAI Genesis 2026

Mar 2026

- Architected an AI-driven decision engine using LangChain and Large Language Models (LLMs) to provide long term roadmaps with survival guidance and resource allocation for individuals in crisis.
- Implemented agentic logic within the roadmap to adapt to varying situations, performing real-time research with access to Brave Search Engine's API in a Tool-Augmented Agent (TAA) flow.

MovieMind

Personal Project

Feb 2026

- Refined a 435k-movie dataset by 99.4% using Pandas, removing low-engagement entries to reduce metadata noise and redundancy for Sci-kit-learn's TF-IDF vectorization modeling, employing NumPy for vector manipulation.
- Deployed a production-ready FastAPI backend to perform content-based recommendations using Cosine Similarity in real-time, utilizing asynchronous communication via Axios for low-latency user experiences.

Noted

Personal Project

Sep 2025

- Engineered an encrypted notes app built around an SQL database, secured via SQLCipher using a user-specified key, and employing CRUD functionality.
- Designed a polished GUI with Python's Tkinter library, specifically using ttkbootstrap to deliver a modern, intuitive interface for storing and retrieving memos.

SMART-AIR

Coursework - Software Design

Dec 2025

- Collaborated within a Scrum team to build and deploy a native Android application for asthma tracking, utilizing sprint planning via Jira to manage features from concept to code, following an Agile Software Development Life Cycle (SDLC).
- Engineered an emergency triage feature in Java, integrated with Firebase's Realtime Database (NoSQL) to ensure data scalability and real-time logging for high-concurrency health data environments.

EXPERIENCE

Diabetes Association of Trinidad and Tobago (DATT)

Intern

Jul 2023 - Aug 2023

- Interviewed attendees at health fairs to collect nutritional data for a DATT survey, directly contributing to the development of new government health protocols.
- Collaborated with a team of interns to co-author a concept note for a nationwide healthy eating campaign targeting secondary schools in Trinidad and Tobago.
